

External Context

Economic background: The continuing economic recovery from coronavirus pandemic, together with the war in Ukraine, higher inflation, and higher interest rates were major issues over the period.

Bank Rate was 0.1% at the beginning of the reporting period. April and May saw the economy gathering momentum as the shackles of the pandemic restrictions were eased. Despite the improving outlook, market expectations were that the Bank of England would delay rate rises until 2022. Rising, persistent inflation changed that.

UK Consumer Price Index (CPI) was 0.7% in March 2021 but thereafter began to steadily increase. Initially driven by energy price effects and by inflation in sectors such as retail and hospitality which were re-opening after the pandemic lockdowns, inflation then was believed to be temporary. Thereafter price rises slowly became more widespread, as a combination of rising global costs and strong demand was exacerbated by supply shortages and transport dislocations. The surge in wholesale gas and electricity prices led to elevated inflation expectations. CPI for February 2022 registered 6.2% year on year, up from 5.5% in the previous month and the highest reading in the National Statistic series. Core inflation, which excludes the more volatile components, rose to 5.2% y/y from 4.4%.

The government's jobs furlough scheme insulated the labour market from the worst effects of the pandemic. The labour market began to tighten and demand for workers grew strongly as employers found it increasingly difficult to find workers to fill vacant jobs. Having peaked at 5.2% in December 2020, unemployment continued to fall and the most recent labour market data for the three months to January 2022 showed the unemployment rate at 3.9% while the employment rate rose to 75.6%. Headline 3-month average annual growth rate for wages were 4.8% for total pay and 3.8% for regular pay. In real terms, after adjusting for inflation, total pay growth was up 0.1% while regular pay fell by 1.0%.

With the fading of lockdown – and, briefly, the 'pingdemic' – restraints, activity in consumer-facing sectors improved substantially as did sectors such as oil and mining with the reopening of oil rigs but materials shortages and the reduction in the real spending power of households and businesses dampened some of the growth momentum. Gross Domestic Product (GDP) grew by an upwardly revised 1.3% in the fourth calendar quarter of 2021 according to the final estimate (initial estimate 1.0%) and took UK GDP to just 0.1% below where it was before the pandemic. The annual growth rate was revised down slightly to 7.4% (from 7.5%) following a revised 9.3% fall in 2020.

Having increased Bank Rate from 0.10% to 0.25% in December, the Bank of England hiked it further to 0.50% in February and 0.75% in March. At the meeting in February, the Monetary Policy Committee (MPC) voted unanimously to start reducing the stock of its asset purchase scheme by ceasing to reinvest the proceeds from maturing bonds as well as starting a programme of selling its corporate bonds.

In its March interest rate announcement, the MPC noted that the invasion of Ukraine had caused further large increases in energy and other commodity prices, with the expectation that the conflict will worsen supply chain disruptions around the world and push CPI inflation to around 8% later in 2022, even higher than forecast only a month before in the February Monetary Policy Report. The Committee also noted that although GDP in January was stronger than expected with business confidence holding up and the labour market remaining robust, consumer confidence had fallen due to the squeeze in real household incomes.

GDP growth in the euro zone increased by 0.3% in calendar Q4 2021 following a gain of 2.3% in the third quarter and 2.2% in the second. Headline inflation remains high, with CPI registering a record 7.5% year-on-year in March, the ninth successive month of rising inflation. Core CPI inflation was 3.0% y/y in March, was well above the European Central Bank's target of 'below, but close to 2%', putting further pressure on its long-term stance of holding its main interest rate of 0%.

The US economy expanded at a downwardly revised annualised rate of 6.9% in Q4 2021, a sharp increase from a gain of 2.3% in the previous quarter. In its March 2022 interest rate announcement, the Federal Reserve raised the Fed Funds rate to between 0.25% and 0.50% and outlined further increases should be expected in the coming months. The Fed also repeated it plan to reduce its asset purchase programme which could start by May 2022.

Financial markets: The conflict in Ukraine added further volatility to the already uncertain inflation and interest rate outlook over the period. The Dow Jones started to decline in January but remained above its pre-pandemic level by the end of the period while the FTSE 250 and FTSE 100 also fell and ended the quarter below their pre-March 2020 levels.

Bond yields were similarly volatile as the tension between higher inflation and flight to quality from the war pushed and pulled yields, but with a general upward trend from higher interest rates dominating as yields generally climbed.

The 5-year UK benchmark gilt yield began the quarter at 0.82% before rising to 1.41%. Over the same period the 10-year gilt yield rose from 0.97% to 1.61% and the 20-year yield from 1.20% to 1.82%.

The Sterling Overnight Rate (SONIA) averaged 0.39% over the quarter.

Credit review: In the first half of FY 2021-22 Credit Default Swap (CDS) spreads were flat over most of period and are broadly in line with their pre-pandemic levels. In September spreads rose by a few basis points due to concerns around Chinese property developer Evergrande defaulting but then fell back. Fitch and Moody's revised upward the outlook on a number of UK banks and building societies on the Authority's counterparty to 'stable', recognising their improved capital positions compared to 2020 and better economic growth prospects in the UK.

Fitch also revised the outlook for Nordea, Svenska Handelsbanken and Handelsbanken plc to stable. The agency considered the improved economic prospects in the Nordic region to have reduced the baseline downside risks it previously assigned to the lenders.

The successful vaccine rollout programme was credit positive for the financial services sector in general and the improved economic outlook meant some institutions were able to reduce provisions for bad loans. However, in 2022, the uncertainty engendered by Russia's invasion of Ukraine pushed CDS prices modestly higher over the first calendar quarter, but only to levels slightly above their 2021 averages, illustrating the general resilience of the banking sector.

Having completed its full review of its credit advice on unsecured deposits, in September Arlingclose extended the maximum duration limit for UK bank entities on its recommended lending list from 35 days to 100 days; a similar extension was advised in December for the non-UK banks on this list. As ever, the institutions and durations on the Authority's counterparty list recommended by Arlingclose remains under constant review.

Externally Managed Pooled Funds: £5m of the Authority's investments is invested in externally managed strategic pooled (bond, equity, multi-asset and property) funds where short-term security and liquidity are lesser considerations, and the objectives instead are regular revenue income and long-term price stability. These funds generated an average total return of (£582k (11.6%), comprising a £177k (3.54%) income return which is used to support services in year, and £405k (8.1%) of capital growth.

In the nine months to December improved market sentiment was reflected in equity, property and multi-asset fund valuations and, in turn, in the capital values of the Authority's property, equity and multi-asset income funds in the Authority's portfolio. The prospect of higher inflation and rising bond yields did however result in muted bond fund performance. In the January- March quarter the two dominant themes were tighter UK and US monetary policy and higher interest rates, and the military invasion of Ukraine by Russia in February, the latter triggering significant volatility and uncertainty in financial markets.

In light of Russia's invasion, Arlingclose contacted the fund managers of our Money Market Fund (MMF), cash plus and strategic funds and confirmed no direct exposure to Russian or Belarusian assets had been identified. Indirect exposures were immaterial. It should be noted that any assets held by banks and financial institutions (e.g. from loans to companies with links to those countries) within MMFs and other pooled funds cannot be identified easily or with any certainty as that level of granular detail is unlikely to be available to the fund managers or Arlingclose in the short-term, if at all.

Because these funds have no defined maturity date, but are available for withdrawal after a notice period, their performance and continued suitability in meeting the Authority's medium- to long-term investment objectives are regularly reviewed. Strategic fund investments are made in the knowledge that capital values will move both up and down on months, quarters and even years; but with the confidence that over a three- to five-year period total returns will exceed cash interest rates. The Council's level of managed pooled funds have not been altered during due to the large amounts of cash in the form of grants coming into and going out of the Council's bank accounts on a weekly basis.

The Authority had budgeted £104,000 income from these investments in 2021 / 22. Income received was £177,000.

Non-Treasury Investments

The definition of investments in CIPFA's revised 2021 Treasury Management Code covers all the financial assets of the Authority as well as other non-financial assets which the Authority holds primarily for financial return. Investments that do not meet the definition of treasury management investments (i.e. management of surplus cash) are categorised as either for service purposes (made explicitly to further service objectives) and or for commercial purposes (made primarily for financial return).

Investment Guidance issued by the Department for Levelling Up Housing and Communities (DLUHC) and Welsh Government also broadens the definition of investments to include all such assets held partially or wholly for financial return.

The Authority held £3.1m of such investments in investment properties.

These investments generated £0.5m of investment income for the Authority after taking account of direct costs, representing a rate of return of 16.1%.

Other

IFRS 16: The implementation of the new IFRS 16 Leases accounting standard was due to come into force for local authorities from 1st April 2022. Following a consultation CIFPA/LASAAC announced an optional two year delay to the implementation of this standard a decision which was confirmed by the Financial Reporting Advisory Board in early April 2022. Authorities can now choose to adopt the new standard on 1st April 2022, 1st April 2023 or 1st April 2024. The Authority has adopted the new standard on 1st April 2022.
